Research Summary

My research focuses on *data-centric AI for multimodal models*, with the goal of enabling ML systems to learn more from less through cheaper, higher-quality supervision. Several *data lifecycle* projects I have worked on: (i) *rubric-guided RL* for high-quality captioning sources used in visual pretraining; (ii) *data selection* via weight-space geometry for efficient pretraining (**ICML'26 + ICML'25 DataWorld Oral**); (iii) *online data mixing* to reduce overhead in multimodal training; (iv) *data curation* via ensemble methods and objective detection (**1st place on the DataComp'23 leaderboard**); (v) a $500\times$ cheaper *automated labeling* system as an alternative to LLM annotators (**NeurIPS'24 Spotlight**); and (vi) a *hybrid evaluation framework* with program synthesis that pushes beyond the current LLM-judge Pareto frontier.
